

echo.

Agent continuity across people, sessions,
and platforms. Like nothing else.

For teams and super individuals.

echoknows.com • kobe@iditor.com

Put every Meta employee on Echo today.

By year end, Meta saves **≈\$0.6–1.0B**

And the work gets better, and faster.

Estimate • the math comes later

\$4M SAFE Seed

Circle area = valuation, smallest to largest, counter-clockwise from the left ~ estimated from latest 2026 round (valuation undisclosed)

Meta is paying tuition: tokens don't buy team output.

 Meta 2026

SPEND

\$4-6B

to  Anthropic EST.

OUTPUT

→ **220%**

more code changes, YoY

COST

74% → **55%**

employee sentiment, same period

40%

more major incidents

70%

more time putting out fires

The bottleneck isn't intelligence.
It's work that doesn't connect.

57%

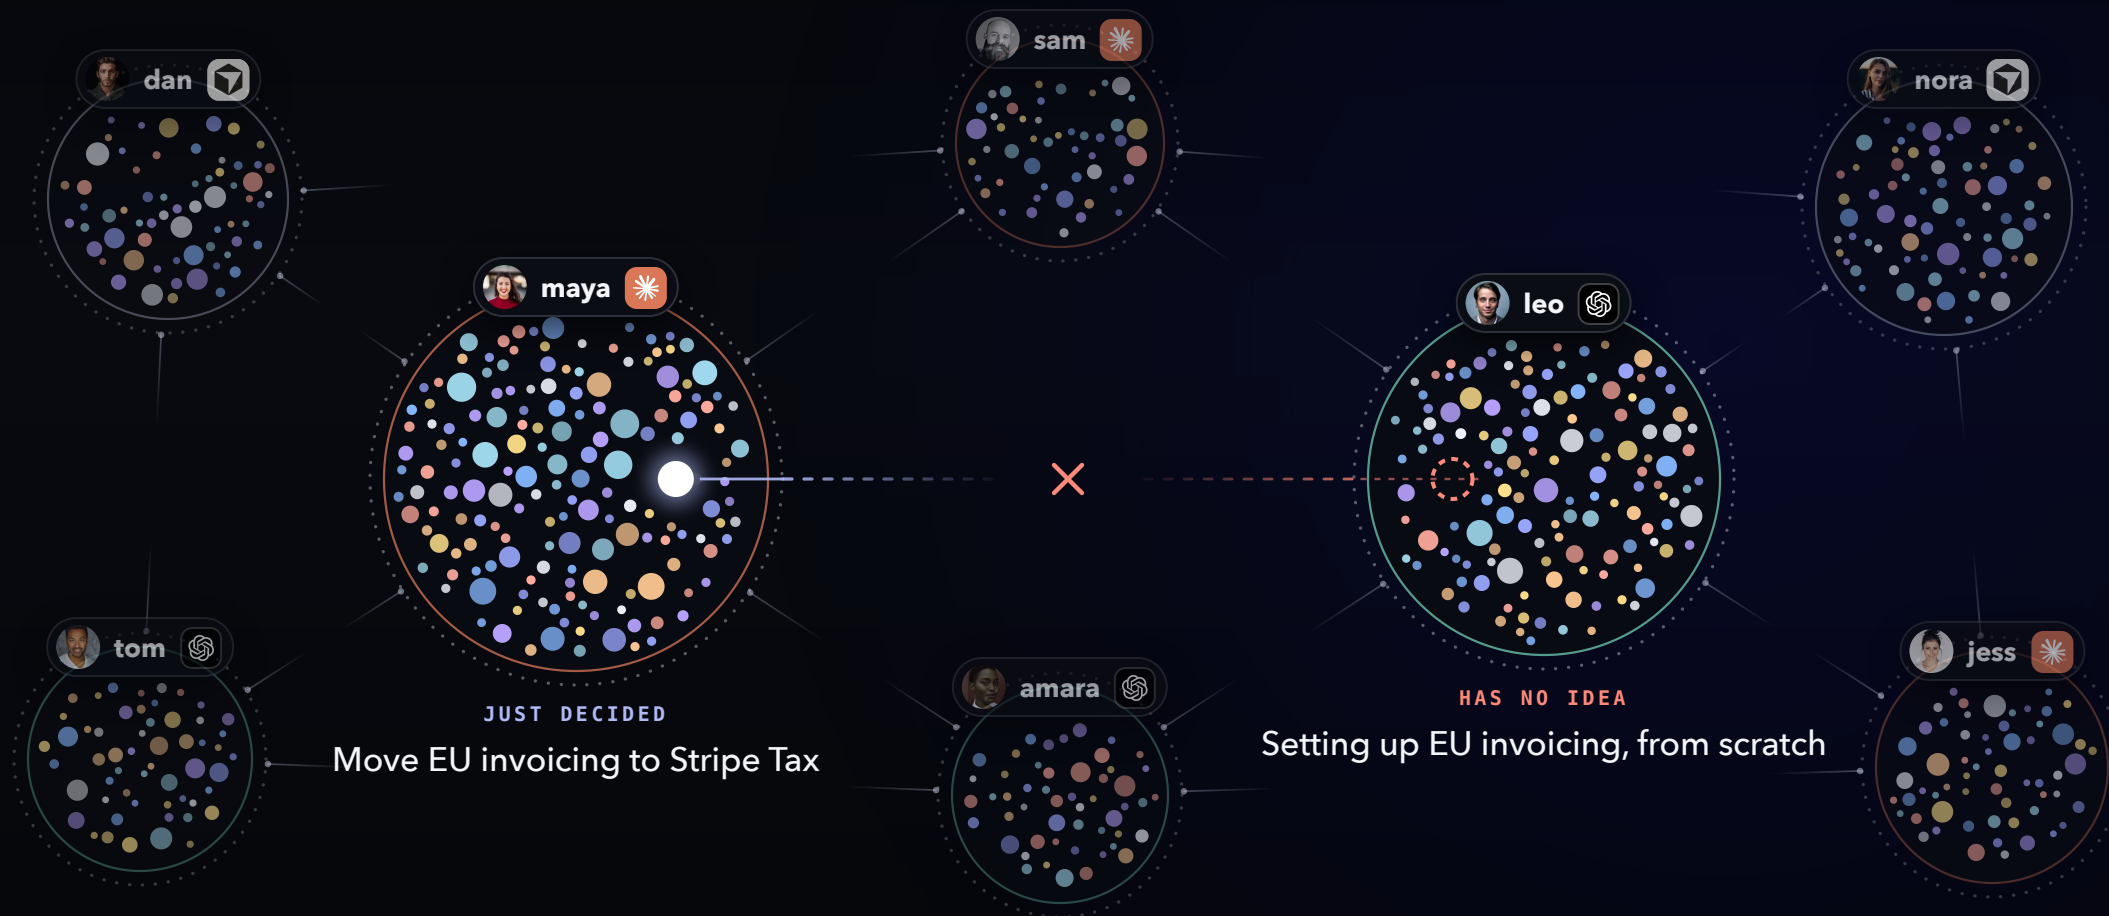

use agents
in many stages

16%

connect them
across teams

Every agent is smart. Every agent works alone.

What Maya's agent just learned, Leo's agent never sees. So people carry it by hand.

What one agent just learned, every agent uses in real time.

01 Capture

Plugs into the agents teams already use.

02 Remember

Why, who, where from, and who may see it.

03 Resume

The next agent starts on turn one.

-60-70% total token spend
no repeated context

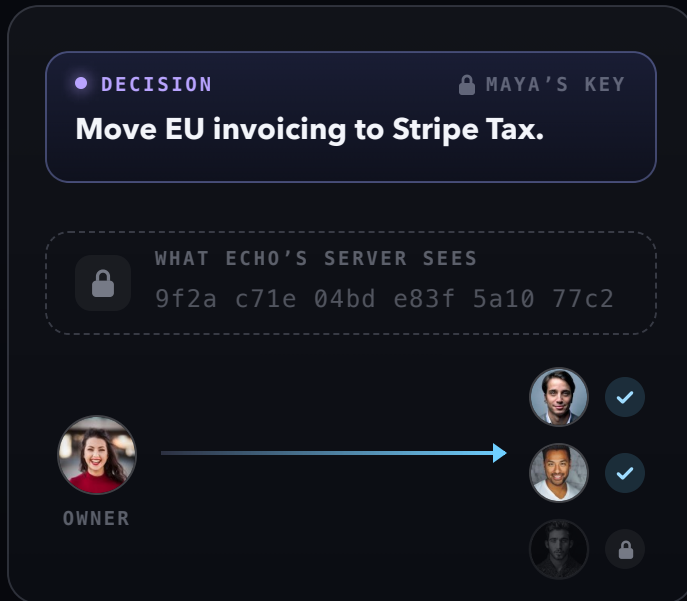

-50% time per task
fewer, faster turns

3.2x effective output
1.5 → 4.8 a day

2.4x projects in parallel
7 → 17, same team

Moat: governance, provenance, auditability.

01 Governance

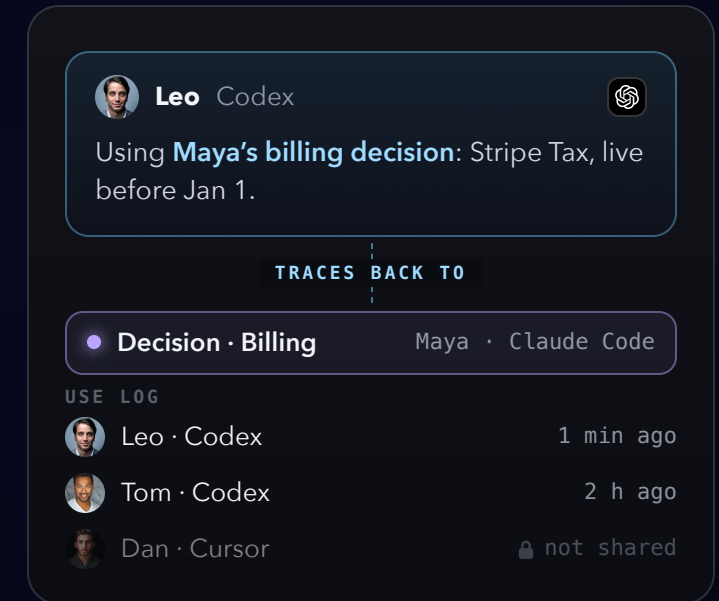

Only the owner holds the key and shares memory by memory. Even Echo can't read it.

02 Provenance

Every memory records who decided, why, and the session and sources it came from.

03 Auditability

Every agent answer traces back to the memories it used, and every use is on record.

One memory across Claude Code, Codex, Cursor and ChatGPT. 95.8% on LongMemEval, ranked #1.

No sales team yet. The \$4M builds one.

In the agent era, Echo is the medium of thought.

Six people, full-time, AI-native

Strong in mathematics, statistics, social products and systems engineering.

Kobe Wang

Founder & CEO · ex-Roblox Social, 100M+ DAU

Biwei (Betti) Tao

Microsoft AI · ex-Amazon Alexa · UC Berkeley Statistics

In the agent economy, a company's context is its most valuable asset. We are building its engine.

Raising a \$4M SAFE.
