"I can save ∞ Meta
\$1B this year."

kobe@iditor.com

Meta is paying tuition: tokens don't buy team output.

 Meta 2026

The bottleneck isn't intelligence.
It's work that doesn't connect.

 57% use agents in many stages → 16% connect them across teams

Smarter agents. Trapped context. Repeated work.

What Maya's agent just learned, Leo's agent never sees. So people carry it by hand.

Each dot: one thing an agent learned • Photos: Unsplash

What one agent just learned, every agent uses in real time.

01 Capture

Plugs into the agents teams already use.

02 Remember

Why, who, where from, and who may see it.

03 Resume

The next agent starts on turn one.

60-70%

less token spend

50%

less time per task

3.2x

more output

2.4x

more projects in parallel

95.8% on LongMemEval. #1.

The highest published score for a memory system on LongMemEval.

01 Governance

● DECISION

🔒 MAYA'S KEY

Move EU invoicing to Stripe Tax.

🔒

WHAT ECHO'S SERVER SEES

9f2a c71e 04bd e83f 5a10 77c2

OWNER

→

✓

✓

🔒

Only the owner holds the key and shares memory by memory. Even Echo can't read it.

02 Provenance

● DECISION · BILLING

Move EU invoicing to Stripe Tax.

WHY

New VAT rules Jan 1; Avalara costs 3× more.

WHO

 Maya · just now

FROM

 Claude Code session

PROOF

3 sources attached

Every memory records who decided, why, and the session and sources it came from.

03 Auditability

 Leo Codex

Using Maya's billing decision: Stripe Tax, live before Jan 1.
